SUMMARY

Full-Stack Developer with a passion for creation and helping clients solve challenges. On any project, the goal is providing innovative solutions to complex problems in a timely fashion. Nine years of business experience working with Fortune 500 companies and small businesses alike. Earned a Bachelor of Arts degree from Fairfield University and currently pursuing a Certificate in Web Development from Rutgers. Proficient in HTML, CSS, JavaScript and React. Server-side experience using Node.js, MongoDB and mySQL.

TECHNICAL SKILLS

Languages: Javascript

Applications: HTML, CSS, Bootstrap, Node.js, Express.js, MongoDB, mySQL, React, JQuery

PROJECTS

Get Out! | [Get Out Repo](#) | [Get Out Site](#)

- A one page web app would allow the user to put in a set of dates, a city and an activity. The site would then connect to the OpenWeather and EventBrite API and return weather data and a list of activities in the chosen city based on the activity chosen.
- Contributed UI design, front end development and API requests. Technologies used were HTML, CSS, Materialize and Javascript.

Karl's Travel Guide | [Karls Travel Guide Repo](#) | [Karl's Travel Guide Site](#)

- A multiple page web app which would allow users to rate niche locations in their favorite cities and see others users ratings. A user could share their favorite locations and see other users favorite locations as well.
- Karl's travel guide was built with a custom API instead of linking to an existing API. Designed the UI with a purposefully minimalist perspective and worked on other aspects of front end development and server development.
- Technologies used included HTML, CSS, Bulma, Javascript/JQuery and mySQL database.

Interested? | |

- Interested is a multiple page web app currently in development. Seeking to simplify dating apps to their core, Interested asks only a few basic questions and allows the user to decide who is a great match by interaction, not a pre-programmed algorithm.
- Designed the UI and created custom React components for the site's navigation.
- Interested is being built from the ground up with React, using Firebase for site authentication and Material UI to aid in providing a simple, yet visually appealing way to find a partner.

EXPERIENCE

Segmentation Specialist
American International Group

2012-2019
New York, NY

- Over the last six years, was responsible for handling excess casualty claim files across five lines of business with diversified clients across all market segments. Worked closely with senior division leadership by providing monthly report noting large changes in reserves allowing for managers to plan for future reserve changes by noting trends.

EDUCATION

Bootcamp Certificate: Rutgers University, Jersey City, NJ

Completed a 24-week intensive program focused on gaining technical programming skills noted above. Through 10 hours per week of classroom training and about 20-25 hours per week outside the class on average, the skills noted above were developed.

Bachelor of Arts (English/Journalism): Fairfield University, Fairfield, CT

During my time at Fairfield, I was heavily involved in Radio work. I spent two summers as a radio broadcaster for the Bridgeport Bluefish (formally of the Atlantic League of Professional Baseball). I had my own radio show my senior year, and was heavily involved in multiple shows throughout my four years.
